TEAR GAS ODOR CASE STUDY

Project Situation

Approximately 32 cans of tear gas had been shot into a mobile home by a SWAT team. Tear gas odor penetrated the entire mobile home. The tear gas odor was so terrible no one could enter the mobile home to clean or do needed repairs.

The homeowner and manager sought out environmentally friendly odor control to eliminate the odor. BioWorld was contacted to provide BioWorld Odor Neutralizer (BON) and a F8026 Triple Nozzle Fogger to resolve the situation.

Products/Technology Used

#41014 BioWorld Odor Neutralizer BON-CC-41 Concentrate
#F8026 Triple Nozzle Fogger

Results

The BON-CC-41 was fogged into the mobile home by using the F8026 Triple Nozzle Fogger. The client was careful to thoroughly fog all areas of the home with the suggested BON/Water dilution rate of 10%. Extra care was taken in fogging and concentrating the BON in the worst areas of the home. After the first application, workers were able to enter the home to clean and begin making repairs. Since this was a severe odor issue, BON was applied in 3 separate applications. After the 3rd application, there was no trace of the tear gas odor in the home. The client was extremely pleased with the results.
