Ranch Lake With Fish Case Study

A Central California ranch property had a 1 acre lake with planktonic, single cell, green water algae. The fish in the lake were not visible. BioWorld was contacted to fix the algae problem without using chemicals.

BioWorld Green Water Algae Treatment products were applied each week. After 6 weeks, the algae were significantly reduced and the fish became more visible. On-going treatments have continued to balance the ecosystem for the long term with environmentally safe and natural products.

BioWorld Products used:
35064 Liquid Optimizer
33086 Green Water Algae Microbes
30086 Algae Microbes
