MUNICIPAL DOWNTOWN ODOR CASE STUDY

Project Situation

A non-profit organization is responsible for cleaning alleys in the downtown area of a major California city. People use the alleys as restrooms and restaurants put organic waste into dumpsters in the alleys. During hot weather, the alleys begin to smell. The waste is removed on a daily basis and the alleys are pressure washed, but the odors are tough to eliminate. BioWorld Liquid Optimizer Plus was purchased and spray applied directly onto the dumpsters and waste areas.

Products/Technology Used

#55064 BioWorld Liquid Optimizer Plus

Results

The alleyway odors were significantly reduced. On-going treatment on an as needed basis has continued to control odors making the downtown area more desirable for businesses and visitors.
