SCHOOL DISTRICT SKUNK ODOR CASE STUDY

Project Situation

A skunk became trapped beneath a building at a school district facility in California. While the skunk was trapped, other skunks marked the perimeter of the building. The trapped skunk was rescued on a Thursday leaving behind significant odors. The Maintenance and Operations Manager located BioWorld via the internet, called for information, and requested overnight delivery of the BioWorld Odor Neutralizer (BON) and a fogging unit. On Saturday (2 days later), diluted BON was fogged beneath the building and sprayed around the perimeter of the building. Another treatment was completed on Monday evening.

Products/Technology Used

#41014 BioWorld Odor Neutralizer BON-CC-41 Concentrate
#F8026 Triple Nozzle Fogger

Results

After the two product applications, the skunk odors were completely eliminated from the building. School District personnel were very appreciative of BioWorld's prompt response and ability to solve the skunk odor problem.
