MOBILE VILLAGE WASTEWATER TREATMENT

Project Situation

A Mobile Village with 44 sites began looking for a solution to maintain seven septic systems (including some with bath houses and laundry facilities) and help minimize pumping costs. The facility also experienced occasional system backups, clogging of drain lines and associated odors.

Products/Technology Used

BioWorld was contacted to address the wastewater issues. BioWorld provided a comprehensive plan to meet the facilities' needs. This included adding BioWorld Wastewater Treatment (Product #35064 & Product #36086) monthly to each septic system based on system size and usage.

Results

BioWorld Wastewater Treatment helped overcome many obstacles associated with the wastewater. The septic waste was degraded, drain lines flowed smoothly, no backups occurred and odors were eliminated. The facility also saved money by significantly reducing the need for pumping. On-going treatment has maintained the systems operating effectively.
