MUNICIPAL MULCH ODOR CASE STUDY

Project Situation

A Virginia city collects and grinds about 16,000 cubic yards of leaves annually at an 8-acre site. The finished mulch is delivered back to city residents. Adjoining property owners to the mulch site complained about odors emanating from the mulch operation. As a result, BioWorld Optimizer Plus was purchased and spray applied to the leaf mulch.

Products/Technology Used

#55064 BioWorld Liquid Optimizer Plus

Results

The odors associated with the mulch operation were eliminated in a few days. On-going treatment has continued to control odors and complaints have stopped.
