Residential Sewage Odor Case Study

A residence experienced a sewage leak from an ejector pump beneath the house. The sewage covered portions of the crawl space and outside ground adjacent to the foundation. After the mess was pumped back into the sewer system, a significant odor remained.

BioWorld provided products and simple instructions to resolve the odor problem. Liquid Optimizer Plus and General Blend Microbes were sprayed applied directly to all surfaces in the crawl space and outside ground area a couple of times. After a few days, the sewage odor was eliminated.

BioWorld Products used:

55014 Liquid Optimizer Plus

36086 General Blend Microbes
