

SOYBEAN SPILL ODOR CASE STUDY

Project Situation

A train derailment in Montana caused a spill of about 37 tons of soybeans. The derailment occurred in a very tight location between a major highway and river making cleanup a challenge. Decomposition of the soybeans in an area estimated at 200,000 square feet along the shoreline created significant odors. BioWorld Liquid Optimizer Plus was purchased and spray applied directly onto the decomposing soybean area.

Products/Technology Used

#55064 BioWorld Liquid Optimizer Plus

Results

Odors emanating from the soybean spill were significantly reduced as the Optimizer Plus helped degrade the organic matter and neutralize odors. According to our client, the product worked well and there were no complaints after applying Optimizer Plus.
