DOG KENNEL ODOR CASE STUDY

Project Situation

A 5,000 square foot dog kennel with concrete flooring and minimal drainage faced ammonia odor problems associated with urine. Several products were tried but the odors worsened. BioWorld was contacted to provide a solution to the problem. Liquid Optimizer Plus, a Triple Nozzle Fogger, a Repeat Cycle Timer and Odor Neutralizer were purchased and used inside the building. Optimizer Plus was diluted with water and spray applied directly to the concrete flooring. The Triple Nozzle Fogger containing diluted BON was set up, cycled on for a few minutes and cycled off for a few minutes. The fogger and timer were moved to various locations within the building.

Products/Technology Used

#55014	BioWorld Liquid Optimizer Plus
#41014	BioWorld Odor Neutralizer BON-CC-41 Concentrate
#F8026	Triple Nozzle Fogger
#PN8322	Repeat Cycle Timer

Results

The odors were eliminated. On-going use on an as needed basis has continued to keep dog and ammonia odors to a minimum. The facility is once again enjoyable for the staff to work in.
